

Hi

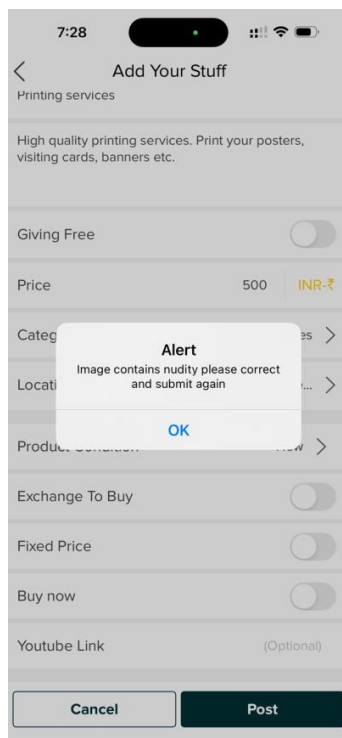

Data is not reflecting on android and ios app.  
Please check. As this is serious issue

It's only showing in website

**QA Response:** We have tested the above-mentioned queries on both Android and iOS applications, and the data is displaying correctly on our end.

**Could you please recheck from your side? If the issue still persists, kindly share your account details so that we can verify it further**

Please check this as well...

When we are posting normal picture. It's saying image contains nudity.

**QA Response:** We have tested the above-mentioned queries, and currently the pop-up appears only for nudity images. Normal images are not displaying the pop-up.

**Kindly share your used image so that we can check this issue in detail from our side.**

There are issues, this app with bugs. We don't get time to test. Now that I'm free, I just browsing through. There are issues and bugs.

I have posted the post from app.

Issues :-

1- There are two times price is mentioned - in the second price column - compulsory, you need to fill it. And that column is having text to select - parent / child option to select.

**QA Response: Could you please explain this in a bit more detail? I would like to understand your point more clearly.**

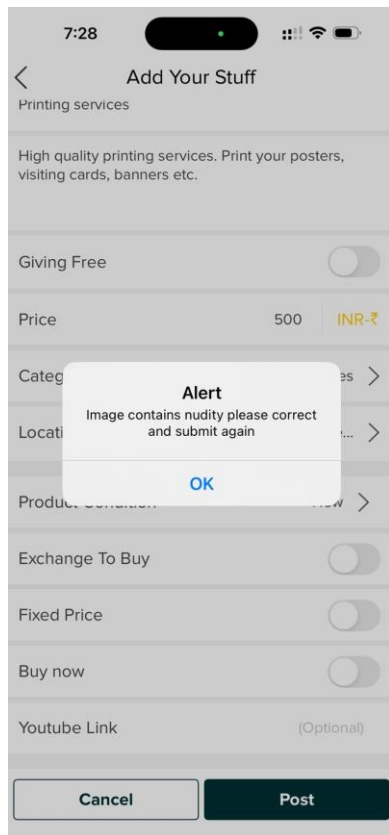

2- When I posted the ad. It's showing in my ads section.  
But it's not showing in the common main page ad.

**QA Response: The reported issues could not be reproduced on our account.  
Kindly recheck from your side, and if the issue still persists, please share your account details so that we can investigate further**

**Video link: <https://file.fast/59LYg/screenrecording-02-20-2026-18-49-061.mp4>**

3- when I have logged in only, I'm seeing ads. In android. Otherwise, I'm not seeing other ads.

**QA Response: The reported issues could not be reproduced on our account.  
Kindly recheck from your side, and if the issue still persists, please share your account details so that we can investigate further**
